

## MINI35: Cable Modification for Canon Professional Viewfinder

**Only authorised technicians allowed to carry out the soldering needed for this modification**

There are two possibilities of fitting the Canon Professional viewfinder onto the Mini35 Image Converter Rev. 2002. Please see the below information:

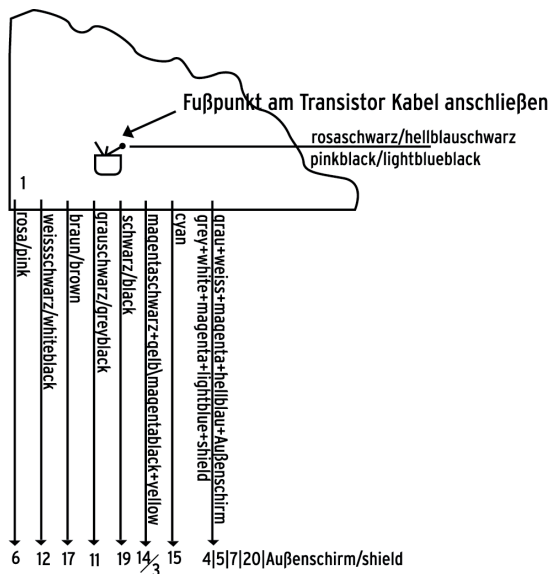

### 1. Possibility

Exchange cable (cable included in Art.No. #18730 - ergonomic holder for Canon Professional Viewfinder)

Step 1) Disassemble viewfinder and remove

Step 2) Remove hook up board (upper board)

You will now see something similar to that of the picture below:

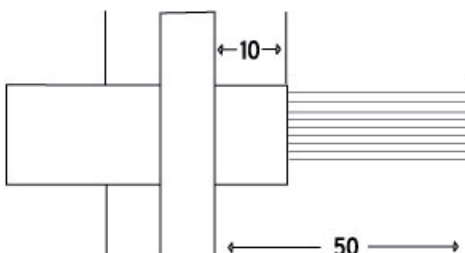

Step 3)

Unsolder the original cable

Step 4)

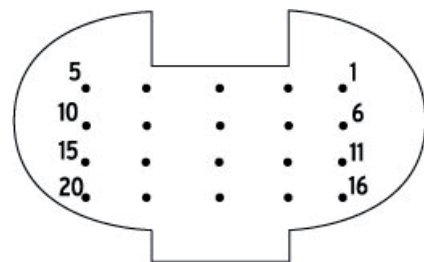

Prepare the new cable by using the original strain relief (cable grip) before the connector is assembled. See below the assembly of the cable strain relief:

Step 5)

Assemble the connector and solder the new cable in place of the old.

Please see below the cable tree of the new cable:

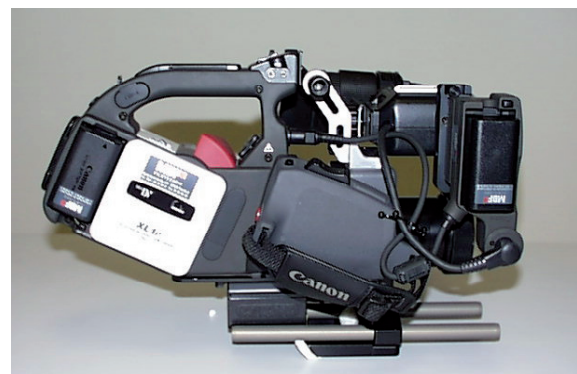

If you do not have the possibility of using an authorised technician, it is possible to send the viewfinder to P+S Technik for this modification. The price of the cable modification for the professional Canon Viewfinder is 70,00 EURO (article number #19094 - price does not include freight charges or insurance).

### Second possibility:

If you do not have the possibility of soldering the parts and you would prefer not to send it to P+S Technik, it is possible to mount the power adapter where the microphone holder is.

Please refer to below picture:

Art. No. #19041 - Mounting Plate for Black / White Finder
