

PS-Standard Rig MkII Upgrade

With the new MkII Upgrade the PS-Standard Rig gets even more versatile and easier to use. To upgrade your PS-Standard Rig you just have to send the relevant parts to P+S TECHNIK.

Improvements

A second pair of horizontal carbon rods makes the PS-Standard Rig even more stable and easier to handle on set and transportation

A guiding rail makes the convergence unsusceptible for tilt movements

Adjustable end stops for interaxial and convergence allows the use of many lens control systems for motorizing the PS-Standard Rig

An improved front filter frame with new designed fixation screws allows a quicker and easier release of the front filter

Features of the PS-Standard Rig MkII Upgrade

- Improved vertical stability for tilt-movements
- Improved stability for cameras over a weight of 6kg
- G-force approved
- End stop for motor calibration to support more lens control systems
- Improvement for the mechanism for quick release of the front filter
- Better handling on set and transportation
